OPERATING MANUAL FOR CABLE AND DRUM ROLLERS
A simple and safe way of guiding heavy cable from a drum to its destination without causing damage.

GENERAL SAFETY

There is a serious risk of personal injury if you do not follow all instructions laid down in this guide.

This equipment should be used by an able bodied, competent adult who has read and understood these instructions. Anyone with either a temporary or permanent disability should seek expert advice before using it.

Keep children, animals and bystanders away from the work area. Cordon off a NO GO area using cones and either barriers or tape. Never use this equipment if you are ill, feeling tired, or under the influence of alcohol or drugs.

Safety goggles MUST be worn by everyone in the work area.

Wear practical, protective clothing, gloves and footwear. Avoid loose clothing and jewellery that could catch in moving parts, tie long hair back.

This equipment is heavy never attempt to lift it on your own, always get help. Ensure the load is balanced, stable and that personnel stand clear of the raised load.

Make sure you know how to operate this equipment safely and aware of its limitations before use.

It is the operator’s responsibility to perform a risk assessment before using this equipment. You are also responsible for the safety of any person in the work area.

Make sure that anyone in the immediate work area is aware of what you are doing. Never exceed the equipments safe working load or maximum capacity, see chart. If the cable drum weight is in excess of the rollers SWL you can use 2 sets side by side.
Check the condition of the equipment before use.

**GETTING STARTED**

Cable Drum Roller (Adjustable)

<table>
<thead>

<td>CRH500</td>
<td>Drum Roller</td>
<td>700mm</td>
<td>200kgs</td>
</tr>
<tr>
<td>CRH 550</td>
<td>Drum Roller</td>
<td>1000mm</td>
<td>700kgs</td>
</tr>
</tbody>
</table>

Place the unit on firm level ground and ensure that it will be deployed onto a firm footing.

**DO NOT** use on slopes, soft ground or where there is a risk of subsiding.

Adjust the distance between the front and rear rollers to suit the size of cable drum.

Ideally the rollers should be as far apart as possible but without the drums edge touching the floor area.

The roller axle ends sit within angled castellations, simply lift the roller and move to the castellation nearest to the required distance.

If using Model CRH550 there is a Brake/Lock lever which can be used to secure the front roller and stop it from spinning when rolling the cable drum on and off the Drum Rollers.

Once all necessary adjustments have been made, roll the cable drum onto the rollers ensuring the cable feeds off from the bottom of the drum, **NOT** the top.

Loosen off the brake/Lock lever to allow the drum to rotate, without freewheeling.
BASIC TECHNIQUE

Always position yourself so you are clear of the cable but can control its direction of travel. Don’t try to run the cable off of the drum too quickly.

Take your time and don’t overdo it. You are more likely to have an accident if you are tired of rushing it.
